Myofilament glycation in diabetes reduces contractility by inhibiting tropomyosin movement, is rescued by cMyBPC domains

August 18th, 2021 – Alex Holehouse, PhD, Assistant Professor of Biochemistry and Molecular Biophysics, along with Shahar Sukenik, Assistant Professor, Department of Chemistry & Biochemistry at University of California, Merced, and Thomas Boothby, Assistant Professor, Department of Molecular Biology, University of Wyoming, received a new four year grant award from the National Science Foundation through the new “Integrative Research in Biology” mechanism for their research entitled “Collaborative Research: Functional Synergy Between Disordered Proteins and their Environment in Desiccation Protection”.
September Publication

*Metapredict: a fast, accurate, and easy-to-use predictor of consensus disorder and structure*

Biophys J. 2021 Sep 2;S0006-3495(21)00725-6. doi: 10.1016/j.bpj.2021.08.039. (2021)
The Burgers Lab studies DNA replication and DNA damage response in eukaryotic cells. Using yeast as a model organism, the lab integrates the biochemical analysis of DNA-protein interactions in purified model systems with the genetic analysis of targeted yeast mutants. Specific areas of interest are lagging strand DNA replication and Okazaki fragment maturation, damage induced mutagenesis, and DNA damage cell cycle checkpoints.

Right: DNA replication fork and Okazaki fragment maturation

The Modern Counseling Solution

Take the first step towards leading a healthy, happy life anywhere, anytime, any place.

NexGen is a FREE and CONFIDENTIAL benefit provided by your university to help you overcome your personal challenges and emotional stressors.

Now, you can start counseling requests via text, message, live chat, or by using the NexGenEAP mobile app.

Counseling services include:

- Immediate connection to a Mental Health Professional
- Mental health counseling for issues like depression, anxiety, grief, stress, and work-related challenges
- Up to 6 sessions of counseling for each unique issue, every year
- Access to free in-person, telephonic, or video sessions with a counselor based on the challenges you are experiencing

Get Connected with a Mental Health Professional in more ways than ever before

Text or Call 1.800.327.2255
Live Chat Online at www.nexgeneap.com
Use the NexGenEAP Mobile App

Congratulations to Jhullian

August 23rd, 2021 – Jhullian Jamille Alston, BA, Pre-Doc Trainee in the department of Biochemistry and Molecular Biophysics, and the laboratories of Alex Holehouse, PhD and Andrea Soranno, PhD, received a Predoctoral to Postdoctoral Fellow Transition Award from the National Cancer Institute for his research entitled “Single Molecule Biophysics of Intrinsically Disordered Proteins in Disease”.

Department of Biochemistry and Molecular Biophysics
Washington University in St. Louis • School of Medicine
The **Niemi Lab** investigates how mitochondria are built, regulated, and maintained across physiological contexts. We blend biochemistry, systems biology, and physiology to understand mechanisms of mitochondrial regulation and how they influence metabolism and organelar function. Using insights gained from our molecular studies, we aim to understand how mitochondrial dysfunction contributes to mammalian pathophysiology, with the long-term goal of translating our discoveries into new therapeutic options to restore mitochondrial function in human disease.

Heterogeneity in E. coli RecBCD Helicase-DNA Binding and Base Pair Melting

August 24th, 2021 – **Benjamin Garcia, PhD**, Raymond H. Wittcoff Distinguished Professor and Head of Biochemistry and Molecular Biophysics, along with Matthew D. Weitzman, PhD, Professor of Microbiology, Professor of Pathology and Laboratory Medicine, University of Pennsylvania Perelman School of Medicine and Children’s Hospital of Philadelphia, received a five year grant renewal from the National Institute of Allergy and Infectious Diseases for their research entitled “**Viral modulation of epitranscriptomic mechanisms**”. 
Are your files backed up?

If you are not keeping your files on a network file server, running a local backup client, or utilizing cloud storage, then it is possible that your files are not backed up!

Want to make sure your data is backed up? We provide several backup solutions.

BMBSupport.wustl.edu/backups
The Cooper Lab is interested in how the actin filaments in cells assemble and how that assembly controls cell shape and movement. One focus is an actin-binding protein called "capping protein," which caps one end of the actin filament. Capping protein is in turn regulated by intrinsically disordered regions of the CARMIL family of proteins, which exhibit positive linkage in their binding interactions.

Are you paid monthly?

Please remember that your time report is due by the 5th of each month.
Congratulations to Dr. Galletto

September 17th, 2021 – **Roberto Galletto, PhD**, Associate Professor in the department of biochemistry and molecular biophysics was awarded a new five year MIRA grant from the National Institute of General Medical Sciences for his research entitled “**Functions of DNA helicases at hard-to-replicate sites and telomere regulation**”.
The Galburt Lab strives to understand the physical mechanisms of transcription initiation and other important DNA-protein interactions. More specifically, we use a variety of single-molecule and ensemble biophysical techniques including both optical and magnetic tweezers and fluorescent microscopy to investigate how the assembly of initiation complexes on gene promoters leads to DNA unwinding and transcription. Our work is currently focused on the mechanisms of basal transcription initiation in Eukaryotes and on factor-regulated transcription in Mycobacterium tuberculosis.

Congratulations to Dr. Hall

September 24th, 2021 - **Dr. Kathleen Hall** was promoted to serve as a senior member of the Washington University School of Medicine Committee on Admissions in recognition of her contributions and dedication to the WUSM Admissions process.
Research in the Lohman Lab focuses on obtaining a molecular understanding of the mechanisms of protein-nucleic acid interactions involved in DNA metabolism, in particular, DNA motor proteins (helicases/translocases) and single stranded DNA binding proteins. Thermodynamic, kinetic, structural and single molecule approaches are used to probe these interactions at the molecular level.

Resident cardiac macrophages mediate adaptive myocardial remodeling

Congratulations to Jasmine Cubuk for being selected for the 2021 Elson Fellowship in honor of Dr. Elliot Elson

Jasmine is a fifth-year graduate student in the Biochemistry, Biophysics, and Structural Biology (BBSB) program. She is doing her PhD thesis work in the lab of Dr. Andrea Soranno, where she studies how sequence composition of intrinsically disordered regions within a protein can affect interactions with both proteins and nucleic acids using single-molecule fluorescence spectroscopy.

Visit biochem.wustl.edu/news to read more!
The **Bowman Lab** seeks to understand the distribution of different structures a protein adopts and how this ensemble determines a protein’s function. Examples of ongoing research projects include 1) understanding how mutations in the enzyme beta-lactamase change its specificity without changing the protein’s crystal structure, 2) designing allosteric drugs, and 3) developing algorithms for quickly building models of the different structures a protein adopts.

BMB SCIENCE FRIDAYS

a forum for new data, new ideas
and works in progress

Science Fridays and Happy Hour:
EVERY FRIDAY, starting at 4PM.
The **Greenberg Lab** focuses on how cytoskeletal motors function in both health and disease. Currently, the lab is studying mutations that cause familial cardiomyopathies, the leading cause of sudden cardiac death in people under 30 years old. The lab uses an array of biochemical, biophysical, and cell biological techniques to decipher how these mutations affect heart contraction from the level of single molecules to the level of engineered tissues. Insights into the disease pathogenesis will guide efforts to develop novel therapies.
