**Advances in mass spectrometry-based footprinting of membrane proteins**

Running low on storage?

WashU IT Research Storage is available to all Faculty members.

The first 5TB of storage are provided at no-cost to you!

Visit for more information: BMBSupport.wustl.edu
March 16th, 2022 – **Alex Holehouse, PhD**, Assistant Professor of Biochemistry and Molecular Biophysics along with Dolf Weijer, PhD, Associate Professor in Laboratory of Biochemistry from Wageningen University and Research, and Hyun Lee, PhD, Assistant Professor of Biochemistry from University of Toronto, received a new three-year grant award from Human Frontier Science Program for their research entitled “**Molecular determinants of evolutionary conservation in disordered protein regions**”.

Parallel path mechanisms lead to nonmonotonic force-velocity curves and an optimum load for molecular motor function

The **Burgers Lab** studies DNA replication and DNA damage response in eukaryotic cells. Using yeast as a model organism, the lab integrates the biochemical analysis of DNA-protein interactions in purified model systems with the genetic analysis of targeted yeast mutants. Specific areas of interest are lagging strand DNA replication and Okazaki fragment maturation, damage induced mutagenesis, and DNA damage cell cycle checkpoints.

Right: DNA replication fork and Okazaki fragment maturation

The Modern Counseling Solution

Take the first step towards leading a healthy, happy life anywhere, anytime, any place.

NexGen is a FREE and CONFIDENTIAL benefit provided by your university to help you overcome your personal challenges and emotional stressors. Now, you can start counseling requests via text message, live chat, or by using the NexGenEAP mobile app.

Counseling services include:

- Immediate Connection to a Mental Health Professional
- Mental health counseling for issues like depression, anxiety, grief, stress, and work related challenges
- Up to 6 sessions of counseling for each unique issue, every year
- Access to free in-person, telephonic, or video sessions with a counselor based on the challenge you are experiencing

Get Connected with a Mental Health Professional in more ways than ever before

Text or Call 1.800.327.2255
Live Chat Online at www.nexgeneap.com
Use the NexGenEAP Mobile App

The Galburt Lab strives to understand the physical mechanisms of transcription initiation and other important DNA-protein interactions. More specifically, we use a variety of single-molecule and ensemble biophysical techniques including both optical and magnetic tweezers and fluorescent microscopy to investigate how the assembly of initiation complexes on gene promoters leads to DNA unwinding and transcription. Our work is currently focused on the mechanisms of basal transcription initiation in Eukaryotes and on factor-regulated transcription in Mycobacterium tuberculosis.

Computer not working?
Not getting email on your smartphone?

We are here to help with the many computing issues that may pop up in your day-to-day operations.

Support email: support@biochem.wustl.edu

Support website: BMBSupport.wustl.edu

Just send us an email or visit our website and click on *Request Support* to get help!
The Niemi Lab investigates how mitochondria are built, regulated, and maintained across physiological contexts. We blend biochemistry, systems biology, and physiology to understand mechanisms of mitochondrial regulation and how they influence metabolism and organellar function. Using insights gained from our molecular studies, we aim to understand how mitochondrial dysfunction contributes to mammalian pathophysiology, with the long-term goal of translating our discoveries into new therapeutic options to restore mitochondrial function in human disease.

How Glutamate Promotes Liquid-liquid Phase Separation and DNA Binding Cooperativity of E. coli SSB Protein

Are your files backed up?

If you are not keeping your files on a network file server, running a local backup client, or utilizing cloud storage, then it is possible that your files are not backed up!

Want to make sure your data is backed up? We provide several backup solutions.

BMBSupport.wustl.edu/backups
The **Cooper Lab** is interested in how the actin filaments in cells assemble and how that assembly controls cell shape and movement. One focus is an actin-binding protein called "capping protein," which caps one end of the actin filament. Capping protein is in turn regulated by intrinsically disordered regions of the CARMIL family of proteins, which exhibit positive linkage in their binding interactions.

Are you paid monthly?

Please remember that your time report is due by the 5th of each month.
March 2\textsuperscript{nd}, 2022 – \textbf{Eric Galburt, PhD}, Associate Professor in Biochemistry and Molecular Biophysics, received a new five-year MIRA grant award from National Institute of General Medical Sciences for his research entitled “\textit{Molecular Mechanisms of Transcription Initiation and DNA Repair}”. 
Research in the **Lohman Lab** focuses on obtaining a molecular understanding of the mechanisms of protein-nucleic acid interactions involved in DNA metabolism, in particular, DNA motor proteins (helicases/translocases) and single stranded DNA binding proteins. Thermodynamic, kinetic, structural and single molecule approaches are used to probe these interactions at the molecular level.

Congratulations to Anna Damato for being selected as the 2022 Ceil M. DeGutis Prize Fellow

Anna Damato is a fifth-year PhD candidate in Neuroscience in the Department of Biology. Anna was nominated for this award by her thesis mentor, Dr. Erik Herzog, in whose lab she is connecting the bench to the bedside by investigating mechanisms of glioblastoma brain tumor circadian rhythms and how they impact the efficacy of chemotherapy. Anna uses real-time bioluminescence reporters of circadian gene expression to analyze the effects of timed treatment, with the goal of maximizing anti-tumor effects and minimizing side effects of chemotherapy in treating an otherwise dismal disease.

April 22nd, 2022 – Andrea Soranno, PhD, Assistant Professor of Biochemistry and Molecular Biophysics along with Kathleen Hall, PhD, Professor of Biochemistry and Molecular Biophysics and Alex Holehouse, PhD, Assistant Professor of Biochemistry and Molecular Biophysics have received a new five-year grant from National Institute of Allergy and Infectious Diseases for their research entitled “A multipronged investigation of SARS-CoV-2 genome packaging”
The **Bowman Lab** seeks to understand the distribution of different structures a protein adopts and how this ensemble determines a protein's function. Examples of ongoing research projects include 1) understanding how mutations in the enzyme beta-lactamase change its specificity without changing the protein's crystal structure, 2) designing allosteric drugs, and 3) developing algorithms for quickly building models of the different structures a protein adopts.

Congratulations to Dr. Janetka

March 1st, 2022 – Jim Janetka, PhD, Professor in Biochemistry and Molecular Biophysics and David Sibley, Professor in Molecular Microbiology received a new five-year grant R01 award from the National Institute of Allergy and Infectious Diseases (NIAID) of the NIH totaling 3.9 million dollars for their research entitled “Optimizing CDPK1 inhibitors for chronic toxoplasmosis”.
BMB SCIENCE FRIDAYS

a forum for new data, new ideas
and works in progress

Science Fridays and Happy Hour:
EVERY FRIDAY, starting at 4PM.

Department of Biochemistry and Molecular Biophysics
Washington University in St. Louis • School of Medicine
The Greenberg Lab focuses on how cytoskeletal motors function in both health and disease. Currently, the lab is studying mutations that cause familial cardiomyopathies, the leading cause of sudden cardiac death in people under 30 years old. The lab uses an array of biochemical, biophysical, and cell biological techniques to decipher how these mutations affect heart contraction from the level of single molecules to the level of engineered tissues. Insights into the disease pathogenesis will guide efforts to develop novel therapies.

Don't Forget!

Please keep your lab locked if no one is in there when you leave.

Don’t forget your keys!

Please remember to take OFF your gloves when leaving the lab.
