"How many biophysicists can you name?"

Gordon Research Conference June 28th - July 2nd, 1976

WashU Research Storage

Running low on storage?

WashU IT **Research Storage** is available to all **Faculty** members.

The first **5TB** of storage are provided at *no-cost* to you!

Visit for more information: BMBSupport.wustl.edu

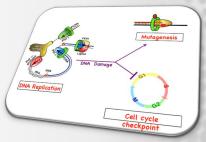

Congratulations to Dr. Greenberg

July 1st, 2022 – **Michael Greenberg, PhD**, Associate Professor of Biochemistry and Molecular Biophysics along with Kory J. Lavine, MD PhD, Associate Professor of Medicine and Nathaniel D. Huebsch, PhD, Assistant Professor of Biomedical Engineering have received a new three-year grant award from American Heart Association for their research entitled "*Human heart-on-a-chip to study the immune system in cardiac disease pathogenesis and repair*".

The **Burgers Lab** studies DNA replication and DNA damage response in eukaryotic cells. Using yeast as a model organism, the lab integrates the biochemical analysis of DNA-protein interactions in purified model systems with the genetic analysis of targeted yeast mutants. Specific areas of interest are lagging strand DNA replication and Okazaki fragment maturation, damage induced mutagenesis, and DNA damage cell cycle checkpoints.

Right: DNA replication fork and Okazaki fragment maturation

The Modern Counseling Solution

Take the first step towards leading a healthy, happy life anywhere, anytime, any place.

NexGenis a FREE and CONFIDENTIAL benefit provided by your university to help you overcome your personal challenges and emotional stressors. Now, you can start counseling requests via text message,live chat, or by using the NexGenEAP mobile app.

Counseling services include:

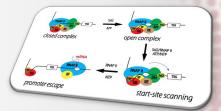

- Immediate Connection to a Mental Health Professional
- Mental health counseling for issues like depression, anxiety, grief, stress, and work related challenges
- · Up to 6 sessions of counseling for each unique issue, every year
- Access to free in-person, telephonic, or video sessions with a counselor based on the challenge you are experiencing

Get Connected with a Mental Health Professional in more ways than ever before

The Galburt Lab strives to understand the physical mechanisms of transcription initiation and other important DNA-protein interactions. More specifically, we use a variety of single-molecule and ensemble biophysical techniques including both optical and magnetic tweezers and fluorescent microscopy to investigate how the assembly of initiation complexes on gene promoters leads to DNA unwinding and transcription. Our work is currently focused on the mechanisms of basal transcription initiation in Eukaryotes and on factor-regulated transcription in Mycobacterium tuberculosis.

BMB Support

Computer not working? Not getting email on your smartphone?

We are here to help with the many computing issues that may pop up in your day-to-day operations.

Support email: support@biochem.wustl.edu

Support website: BMBSupport.wustl.edu

Just send us an email or visit our website and click on *Request Support* to get help!

The **Niemi Lab** investigates how mitochondria are built, regulated, and maintained across physiological contexts. We blend biochemistry, systems biology, and physiology to understand mechanisms of mitochondrial regulation and how they influence metabolism and organellar function. Using insights gained from our molecular studies, we aim to understand how mitochondrial dysfunction contributes to mammalian pathophysiology, with the long-term goal of translating our discoveries into new therapeutic options to restore mitochondrial function in human disease.

Congratulations to Dr. Garcia

August 16th, 2022 – **Benjamin Garcia, PhD**, Raymond H. Wittcoff Distinguished Professor and Head of Biochemistry and Molecular Biophysics, along with Elizabeth Bhoj, MD, PhD, Assistant Professor of Pediatrics, University of Pennsylvania of Medicine and Children's Hospital of Philadelphia received a five year grant from the National Institutes of Health for their research entitled "Quantitative mass spectrometry for comprehending epigenetic mechanisms in a new underlying neurological developmental disorder".

Back Up Your Stuff!

Are your files backed up?

If you are not keeping your files on a network file server, running a local backup client, or utilizing cloud storage, then it is possible that your files are **not** backed up!

Want to make sure your data is backed up? We provide several backup solutions.

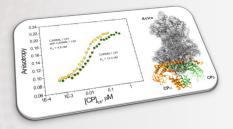

BMBSupport.wustl.edu/backups

The **Cooper Lab** is interested in how the actin filaments in cells assemble and how that assembly controls cell shape and movement. One focus is an actin-binding protein called "capping protein," which caps one end of the actin filament. Capping protein is in turn regulated by intrinsically disordered regions of the CARMIL family of proteins, which exhibit positive linkage in their binding interactions.

Department of Biochemistry and Molecular Biophysics

Washington University in St. Louis • School of Medicine

Are you paid monthly?

Please remember that your time report is due by the 5th of each month.

Congratulations to Dr. Galburt

March 2nd, 2022 – **Eric Galburt, PhD**, Associate Professor in Biochemistry and Molecular Biophysics, received a new five-year MIRA grant award from National Institute of General Medical Sciences for his research entitled "*Molecular Mechanisms of Transcription Initiation* and DNA Repair".

Department of Biochemistry and Wolecular Biophysics

Research in the **Lohman Lab** focuses on obtaining a molecular understanding of the mechanisms of protein-nucleic acid interactions involved in DNA metabolism, in particular, DNA motor proteins (helicases/translocases) and single stranded DNA binding proteins. Thermodynamic, kinetic, structural and single molecule approaches are used to probe these interactions at the molecular level.

Department of Biochemistry and Wolecular Biophysics

Congratulations to Anna Damato for being selected as the 2022 Ceil M. DeGutis Prize Fellow

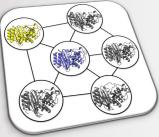

Anna Damato is a fifth-year PhD candidate in Neuroscience in the Department of Biology. Anna was nominated for this award by her thesis mentor, Dr. Erik Herzog, in whose lab she is connecting the bench to the bedside by investigating mechanisms of glioblastoma brain tumor circadian rhythms and how they impact the efficacy of chemotherapy. Anna uses real-time bioluminescence reporters of circadian gene expression to analyze the effects of timed treatment, with the goal of maximizing anti-tumor effects and minimizing side effects of chemotherapy in treating an otherwise dismal disease.

Visit biochem.wustl.edu/news to read more!

Congratulations

April 22nd, 2022 – Andrea Soranno, PhD, Assistant Professor of Biochemistry and Molecular Biophysics along with Kathleen Hall, PhD, Professor of Biochemistry and Molecular Biophysics and Alex Holehouse, PhD, Assistant Professor of Biochemistry and Molecular Biophysics have received a new five-year grant from National Institute of Allergy and Infectious Diseases for their research entitled "A multipronged investigation of SARS-CoV-2 genome packaging"

The **Bowman Lab** seeks to understand the distribution of different structures a protein adopts and how this ensemble determines a proteins function. Examples of ongoing research projects include 1) understanding how mutations in the enzyme beta-lactamase change its specificity without changing the protein's crystal structure, 2) designing allosteric drugs, and 3) developing algorithms for quickly building models of the different structures a protein adopts.

Holiday Schedule

Holiday	Day Observed	Date Observed at WashU
Independence Day	Monday	July 4 th , 2022
Labor Day	Monday	September 5 th , 2022
Thanksgiving Day	Thursday	November 24 th , 2022
Day after Thanksgiving	Friday	November 25 th , 2022
Christmas Eve	Friday	December 23 rd , 2022
Christmas Day	Monday	December 26 th , 2022

Department of Biochemistry and Molecular Biophysics

The **Greenberg Lab** focuses on how cytoskeletal motors function in both health and disease. Currently, the lab is studying mutations that cause familial cardiomyopathies, the leading cause of sudden cardiac death in people under 30 years old. The lab uses an array of biochemical, biophysical, and cell biological techniques to decipher how these mutations affect heart contraction from the level of single molecules to the level of engineered tissues. Insights into the disease pathogenesis will guide efforts to develop novel therapies.

BMB SCIENCE FRIDAYS

a forum for new data, new ideas and works in progress

Science Fridays and Happy Hour: EVERY FRIDAY, starting at 4PM.

Department of Biochemistry and Molecular Biophysics

Washington University in St. Louis • School of Medicine

Don't Forget!

Please keep your lab locked if no one is in there when you leave.

Don't forget your keys!

Please remember to take OFF your gloves when leaving the lab.
